## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 58 and 85 – 113 drawn to an automated centrifuge apparatus and a method for using the apparatus, classified in class 422, subclass 72.
- II. Claims 59 – 71, drawn to a centrifuge rotor apparatus, classified in class 422, subclass 72.
- III. Claims 72 – 84, drawn to a method of treating one or more samples in a centrifuge rotor apparatus, classified in class 436, subclass 45.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility, such as for use in a centrifuge system not requiring the incorporation of a robotic apparatus or other recited features, such as an rotary optical encoder, a reference index or a secondary motor. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice

Art Unit: 1743

another and materially different process. See MPEP § 806.05(e). In this case, the process as claimed can be practiced by another materially different apparatus. For example, the process as claimed does not require that the apparatus used for its practice have certain features, such as an rotary optical encoder, a reference index or a secondary motor.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. See MPEP § 806.05(e). In this case, the process as claimed can be practiced by another materially different apparatus. For example, the process as claimed does not require that the apparatus used for its practice have certain recited structural features, such as a rotor body comprising of at least one cluster of sample receiving element disposed therein, wherein the cluster comprises a plurality of sample receiving elements comprising either substantially parallel longitudinal axes, longitudinal axes less than completely vertical, or longitudinal axes less than 1° less than vertical.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

A telephone call was made to Jonathan A. Quine on 11/3/2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 1743

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
